

RAMAN BIJU

Cybersecurity Engineer

Navi Mumbai, Maharashtra | +916238685842 | ramanbijumkar@gmail.com

LinkedIn: <https://www.linkedin.com/in/raman-biju>

Cybersecurity professional and a Bug Bounty Hunter by passion with 2+ years of hands-on experience in penetration testing, training and mentoring aspiring professionals. Passionate educator skilled in delivering hands-on labs, designing structured training modules, conducting capture the flag events & hackathons and staying current with industry trends. I spend my leisure time performing bug hunting and solving hack-rooms constantly learning and upgrading my skillset.

WORK EXPERIENCE

MRWEBSECURE PVT LTD

07/2025 - 08/2026

Information Security Trainer

- Providing training to students and working professionals along with hands-on lab experience.
- Research and Development of curriculum and modules.
- Organizing and managing workshops, seminars, gamified labs and much more.
- Organized an International CTF with 500+ participants.

GROOTT

11/2024 - 05/2025

SOC Analyst and Security Tester

- Monitored and analyzed security alerts using SIEM tools to identify potential threats and anomalies in real-time.
- Assisted in triaging and escalating incidents based on severity and organizational impact.
- Conducted initial investigation of phishing attempts, malware alerts, and unauthorized access attempts.
- Documented incident response actions and contributed to daily security operations reporting and threat intelligence updates.

CYSECURIX

02/2024 - 10/2024

Security Research Engineer

- Developed comprehensive educational content, including full-fledged notes, practice labs and real-world scenarios.
- Conducted in-depth research and authored insightful article content on emerging cybersecurity trends.
- Organized and hosted Capture the Flag events, workshops and awareness sessions.
- Collaborated with industry professionals to design training modules.

INNOVWHIZ

12/2022 - 07/2024

Founder and Trainer

- Led the Education Community, offering comprehensive training on fundamental and core cybersecurity concepts.
- Delivered fully personalized notes covering over 80 key topics.
- We successfully hosted a 4-hour Capture the Flag (CTF) event with 90 participants across 30 teams.
- Successfully trained 150+ students in cybersecurity and Python programming.

PROJECTS (9)

Demon Slayer CTF [[GitHub](#)]

05/2026 - 06/2026

- Developed a fully featured International CTF platform, handling 500+ players with custom-built infrastructure, dynamic challenge deployment, and real-time player analytics.
- Implemented challenges spanning Web Security, Active Directory, Reverse Engineering, Digital Forensics, Cryptography, OSINT, and Binary Exploitation using containerized services and custom backend tooling.
- Built live score tracking, automated flag validation, configurable challenge endpoints (HTTP/SSH/Netcat), and scalable administration tools for managing online competitions.
- **Technology Stack:** HTML, CSS, JavaScript, Python, Debian Linux, Docker

CrackTheShell - CTF Management Project [[GitHub](#)]

04/2026 - 05/2026

- Centralized system for handling challenge workflows, validating flag submissions, and securely managing data within protected environments.
- Security Vulnerabilities addressed in this project include injection attacks, rate-limit violations of traffic, token-base attacks, authorization factors and IDOR style attacks.
- Robust validation and sanitization mechanisms designed to prevent injection-based attacks and ensure integrity of

submitted flags.

- **Technology Stack:** Python, Flask, JavaScript, Debian Linux, AWS

SkillIssue.exe – Where Kali’s CLI power meets GUI speed

11/2025 - Current

- A GUI wrapper for Kali that cuts tool setup time and maximizes focus during exams, CTFs, and real-world testing.
- Designed and implemented a unified GUI framework that wraps Kali Linux CLI tools, significantly reducing execution time and cognitive overhead during CTFs, bug bounty engagements, and certification labs.
- Streamlined offensive security workflows by centralizing reconnaissance, exploitation, and post-exploitation tools into an intuitive interface, improving speed, accuracy, and repeatability of attacks.
- **Technology Stack:** Python, Flask, JavaScript, Bash

Defense Sphere – Insider Threat Protection Framework [\[GitHub\]](#)

03/2025

- A comprehensive security framework designed to detect and mitigate insider threats through real-time file integrity monitoring, facial recognition authentication, and phishing content detection.
- Includes dynamic dashboards, secure API endpoints, password strength analysis, and user interaction enhancements for improved system control and response.
- **Technology Stack:** Python, OpenCV, Flask, JavaScript, Flet

Xylem Network Analyzer with ML Integration [\[GitHub\]](#) [\[YouTube\]](#)

07/2024

- A sophisticated Network Analyzer designed to enhance security using advanced Machine Learning algorithms for anomaly detection and real-time insights into Network traffic and Potential threats.
- Additional Features include Threat’s Geolocation Tracer, Alert notification and ML based Severity Ranking System.
- **Technology Stack:** Python, MySQL and Grafana

C2C Malware [\[GitHub\]](#)

06/2023

- Developed a fully functional Command and Control (C2C) malware to demonstrate malware operations and illustrate the significant impact of infections for educational purposes.
- This application utilizes the Telegram API, allowing remote control from anywhere around the globe in real-time.
- Embedded over 30 distinct features.

Backup System [\[GitHub\]](#)

10/2023

- A flutter-based application to manage your data backup and restore them in one click.
- Custom Cryptographic Algorithm applied to the database to defend against Data-breach events.
- **Technology Stack:** Python and Flet

Host-based Firewall Configuration System [\[GitHub\]](#)

01/2025

- A firewall capable of adding, removing and changing firewall rules of a Windows system.
- Allowing users to easily manage custom rules and monitor firewall behavior within a single platform.
- **Technology Stack:** Python and Flet

Nexara – 3D Solar System Web App for Near-Earth Objects

10/2024

- Developed Nexara, a 3D solar system web app for Near-Earth Objects (NEOs). The app includes engaging quizzes designed for children and features detailed planetary surface visualizations, aiming to make planetarium like experiences accessible to users remotely.
- **Technology Stack:** Python, Web Development, Three.js, API Integration, Data Visualization

ACHIEVEMENTS

Critical Vulnerability Discovery and Mitigation

05/2023

CVE score: 8 (*High Severity*)

Vulnerability: Business Logic Flaw

Impact: Enhanced system integrity and safeguarding approximately **\$490,000** in potential revenue loss.

Outcome: Implemented remediation strategies; bolstered website security, reducing vulnerability incidents by 40% and even enhancing user data protection.

SKILLS

Cybersecurity Skills	Web Application and Network Pentesting, Exploit Development, Vulnerability Assessment, Threat Hunting
Soft Skills	Leadership and Mentorship, Technical Communication, Team collaboration, Content Writing
Tools and Gadgets	Nmap, Burpsuite, Metasploit Framework, Wireshark, John, Hydra
Operating System	Windows, Kali Linux and Black Arch Linux
Programming and Scripting	Python, Java Script, SQL and Bash Scripting

EDUCATION

Btech Computer Science and Engineering	05/2025
Sandip University, Nashik	
- Majors in Cybersecurity and Forensics - CGPA: 8.0	

LANGUAGES

English	Hindi	Malayalam
